

# **StyleTap® Platform for Symbian OS™**

## **Beta User Guide**

Copyright © 2005-2009 StyleTap Inc. All rights reserved.

## **What is StyleTap Platform for Symbian OS?**

StyleTap Platform is a program that runs on Symbian OS-based smartphones. It allows you to run Palm OS® applications on your Symbian smartphone device. StyleTap Platform is a product of StyleTap Inc. It is a licensed software program.

## **What versions of the program are available?**

The StyleTap Platform program is distributed as a trial version that you can evaluate for 30 days without purchasing a license. If you purchase a license from [www.styletap.com](http://www.styletap.com) or from one of our distributors, you can continue to use the program after the 30-day trial period.

## **Where can I find out more about StyleTap Platform?**

Check our website at [www.styletap.com](http://www.styletap.com).

## **On what Symbian smartphones can I run StyleTap Platform?**

StyleTap Platform works on devices that run Symbian OS software. The following versions are supported:

- UIQ 3 and later
- S60 3<sup>rd</sup> Edition and later including S60 5<sup>th</sup> Edition touch ui

## **How can I get a copy of the StyleTap software?**

You can download the trial version of StyleTap Platform from our website, [www.styletap.com](http://www.styletap.com). This version allows you to run the software for 30 days. To continue using the product after that, you must register and purchase a license from the website. When you register your software, your trial version becomes a fully licensed installation.

## **How do I install StyleTap Platform on my Symbian OS device?**

1. Download the desktop installation package and install it on your Windows PC. At the end of the installation, you can in turn have the smartphone installation package automatically downloaded to your phone if it is already connected to your PC (using Nokia PC Suite, Sony-Ericsson PC Suite, or Motorola PcSync as appropriate). If you do not succeed in this final step of getting the software on to your phone, you can try again later. The smartphone installation package remains in the directory where you installed the desktop components (typically `c:\Program Files\StyleTap\StyleTap\StyleTapSymbian.sis`). Use this file to go to option 2 below.

OR

2. Install the smartphone installation package (StyleTapSymbian.sis) manually on your phone. Here are the steps:
  - Download the StyleTap Platform installation package to a temporary directory on your

Windows desktop computer. The name of the setup program has the form StyleTapSymbian.sis. Or you can use the file from step 1 above.

- Attach your smartphone to your PC via a USB cable, Bluetooth or infrared. Make sure that Nokia PC Suite, Sony-Ericsson PC Suite, or Motorola PcSync is running on the PC and that it says that your smartphone is connected to the PC.
- Run the Application Installer of PC Suite or PcSync, choose the file from step 1, and install it to your smartphone.
- Along with StyleTap Platform, several sample Palm OS applications are installed to get you started.

OR

3. You may choose other methods to get the .sis file onto your smartphone, such as copying it on to a media card, and then inserting that media card into the smartphone, and then launching the file using the file manager utility. Another possibility is to download the installation package using the browser on the smartphone, then installing it.

### **How do I run a Palm OS application with StyleTap Platform?**

Find the StyleTap Launcher program and launch it first. It will be found in different locations depending on your particular smartphone. For example, on Sony-Ericsson smartphones, it will be under the "Tools" folder; on Nokia S60 and Motorola smartphones, it will be in the "Applications" folder. If you run the StyleTap Launcher application by tapping on its icon, you will see a customizable display of just the Palm OS applications that are installed on your device. Within this display you can tap on any application icon or name to run the application.

While you are running a Palm OS application under StyleTap Platform, the menubar at the bottom of the display contains a menu item "Launcher". When you select "Launcher", the current application is suspended and the StyleTap Launcher screen appears. This is the easiest way to switch from one StyleTap application to another.

### **Installing additional Palm OS applications for StyleTap Platform?**

Other than the sample applications that are bundled into the initial installation, you are responsible for legally obtaining and installing the applications that you wish to run with StyleTap Platform.

You can install Palm OS applications by:

1. Using the StyleTap Application Installer following these steps:
  - The StyleTap Application Installer program is installed on your Windows desktop computer when StyleTap software is first installed. To use it, make sure that the Palm OS application program is located on your desktop hard drive and that PC Suite or PcSync is running and connected to the smartphone.
  - Run the application installer (ApplInstaller.exe) from its desktop icon or from the Windows desktop Start menu (under "StyleTap").
  - Click the "Add..." button and browse to find the Palm OS application that you want to install onto your smartphone. Palm OS applications are files with the extension ".prc".

You can install several applications at the same time. You can also install application databases (with the extension ".pdb").

- After you have selected the applications to install, click the "Install all to device" button. The application program will be copied to a special directory on the mobile device. An icon for the program will be added to the "Programs" folder, accessible from the Start menu. See the section How do I run a Palm OS application with StyleTap Platform? for instructions on running the application that you have just installed.
2. You can also install applications by copying application files (.prc or .pdb files) on to a media card, and then inserting the media card in your phone. Using the File Manager tool on your phone, you then find the files and open them. The StyleTap Launcher will copy and install the files.
  3. By beaming or sending using Bluetooth, you can send the application files to the messaging inbox on your phone. You then open the files using the messaging application and they are copied and installed by the StyleTap Launcher.
  4. With the phone web browser, you can directly download .prc and .pdb files to your phone from a website, and then open them to have the StyleTap Launcher install them.

### **How can I register my copy and purchase a license?**

After you first install StyleTap Platform, you are allowed to run the program for a period of time on a trial basis. Each time you launch StyleTap Platform, you are reminded of the number of days left in the trial. When the trial period expires, the program no longer operates.

To continue using StyleTap Platform, you must register your copy and purchase a program license. The "About StyleTap Platform" screen, which is presented every time you run the trial program or whenever you tap the About StyleTap Platform command on the Tools menu, allows you to enter your license registration information.

On the Registration Info screen, carefully note the numbers that appear below "Product Key".

Visit the StyleTap website at [www.styletap.com](http://www.styletap.com) and follow the links to the product purchase page. Follow the instructions and enter your purchase information and the Product Key code that you noted above. When your purchase is verified, you will be given a "Registration Key" code.

Carefully enter the Registration Key in the space provided on the Registration Info screen and tap "Done". Your copy of StyleTap Platform is now registered and licensed.

Remember that this Registration Key only works on your particular smartphone. It cannot be used to unlock StyleTap Platform on any other smartphone.

Users who have purchased multiple licenses have the option of using the "Register Corporate Version" option on the Registration Info screen. They will have received either a StyleTap userid and password or a coupon code. In either case, their devices can now be registered directly from their devices over the internet using this option rather than having to login to our website to obtain the registration code for each device.

### **Can I transfer my license to another smartphone?**

You cannot use the same Registration Key on another smartphone.

Provided that you uninstall StyleTap Platform on the first licensed device (or if the device is destroyed), you can obtain a Registration Key for another device. Follow the link "Need a replacement Registration Key?" at [www.styletap.com/contact.php](http://www.styletap.com/contact.php). After you supply the details of your original purchase, we will send you a replacement key for your new device.

### **How can I uninstall StyleTap Platform from my mobile device?**

For some smartphones, the uninstall function is found in Tools > Control Panel > Other > Uninstall. For others, it is in Tools > Applications > App. Mgr. Please consult documentation for your smartphone.

### **What limitations apply to this version of StyleTap Platform?**

StyleTap Platform runs on S60 3<sup>rd</sup> Edition, S60 5<sup>th</sup> Edition and UIQ 3 smartphones only. Prior versions are not supported.

1. The trial version runs for 30 days after installation, and then it is automatically disabled. To continue to use the product, you must purchase a license. (See "How can I register my copy and purchase a license?")
2. StyleTap Platform does not support
  - Conduits
  - "hacks" (as defined by Edward Keyes' HackMaster API)
  - BlueTooth
3. StyleTap Platform is designed to run applications that run on the Palm OS 5.2 API (and earlier versions of Palm OS). This includes both programs that were designed for the M68K processor and programs that use PNOs (native ARM code). A few features of the Palm OS API are not supported.
4. The current version of StyleTap Platform supports English only. (See Overlay Support in the Technical Notes section below for more information.)

### **What applications can I run with StyleTap Platform?**

We have tested many popular applications and determined that they run normally under StyleTap Platform. Our goal is to support as many applications as possible. If you discover that an application that you wish to use does not run as expected under StyleTap Platform, please let us know. We will make our best effort to resolve the problem quickly. Report the problem, in as much detail as possible, through the support page on our website at [www.styletap.com](http://www.styletap.com).

### **Where can I find applications to run with StyleTap Platform?**

Applications can be downloaded from many sites, including

- <http://www.palmgear.com>

- <http://www.handango.com>
- <http://www.freewarepalm.com>
- <http://www.palm4you.com>

StyleTap Platform is not affiliated with nor authorized, endorsed or licensed in any way by these websites, their affiliates or subsidiaries.

## TECHNICAL NOTES

### 1. Color modes

StyleTap Platform lets you choose the default color mode, which is used when an application is first launched. StyleTap Platform supports 1, 2, 4, 8 and 16 bit color modes. Normally, you do not have to change the color mode from the default 8 bit mode. However, some older applications (written for Palm OS before version 3.5) assume that the color mode is already set to some other value and write directly to the screen. These applications may not display properly unless you change the default color mode to match the mode expected by the application. Choose the "Color Mode" menu option in the StyleTap Launcher to make this change.

### 2. Private records

Private records are supported. The record security level is specified by choosing the "Record Security" menu option in the StyleTap Launcher. [Password info to be added.]

### 3. Overlay support

This version of StyleTap Platform is an English-only version. However, overlays are supported. Whenever an application is launched, StyleTap Platform tries to load an application overlay that matches the language and country specified in the [to be added]. If that particular overlay is not found, it tries to load an English US overlay. Note that some applications will not run unless an appropriate overlay is installed.

### 4. TCP/IP configuration

Configuration settings for both TCP/IP communications are specified using smartphone settings.
